

Postdoctoral Fellow: Structural biology of chromatin modifiers

A postdoctoral position is available in the laboratory of Dr. Karim-Jean Armache at the Skirball Institute of Biomedical Research—NYU Medical Center, New York, USA. We are looking for highly motivated, creative individuals with a strong interest in epigenetics and chromatin biology. We are presently focusing our efforts on chromatin-modifying factors and their complexes with nucleosomes, using X-ray crystallography, complemented with other biochemical/biophysical techniques.

Applicants should have a PhD in biochemistry or biophysics. Experience in the biochemical and biophysical characterization of protein complexes is preferred. Experience in X-ray crystallography and/or electron microscopy would be a plus. The candidate must have an excellent command of oral and written English.

Applicants should send a single PDF file containing their CV along with a summary of their previous research experience, accomplishments, and experimental expertise. They should also arrange for 3 letters of reference to be sent directly to Dr. Karim-Jean Armache via e-mail at:
